

A preconference workshop by RSPCA Ideas for presentations

Agenda - LASA - in person at Visakhapatnam

5	Introduction
5	Presentation - survey results and comparison with EU data
20	Presentation - what do we mean by 'animal welfare'? Including 5 Domains model (based on ' animal voice ' slide set) and with interactive element. Also base on Introduction to animal sentience and animal voice (my learning Hive)
30	Presentation - understanding animals and assessing welfare (including recognising pain and distress). Also include graphic examples (e.g. animals with piloerection, stereotyping) and ask whether people have seen this, is it a problem, how do they think animals are actually feeling. Include analgesia - often not given
10	Discussion (in pairs or around tables) - do you apply any of the suggestions, that you saw in the presentation, for reducing harms? Are there any that you'd like to try? Would you be supported, or would you encounter obstacles (and if so, how would you overcome these)?
15	Feedback, for a few key points (not everyone)
45	Break
15	Presentation - using the Roadmap to identify harms to animals and refinements (simplified, just explaining the sheets)
20	Practical exercise in pairs/round tables; using the sheets and an example protocol. What causes of pain and distress can you identify; how would you reduce these; what practical welfare indicators can you identify? Use a very simple example, e.g. blood sampling, admin of substances (maybe both), include routes
20	Feedback
10	Break
30	Presentation - humane killing and euthanasia including different techniques
25	Discussion (beginning with polling to see which techniques people are using) - how effectively do participants feel they are refining humane killing and what would they need to make further progress?
10	Conclusions - Padlet exercise to see what participants intend to do as a result of the workshop

Agenda - pharma - online

5	Introduction
20	Why does animal welfare matter?

	Examples of confounds due to inadequate environments/husbandry
5	Presentation - survey results and comparison with EU data
30	Presentation - understanding animals and assessing welfare (including recognising pain and distress)
10	Discussion (in pairs or around tables) - do you apply any of the suggestions, that you saw in the presentation, for reducing harms? Are there any that you'd like to try? How do you think data quality may be affected?
15	Feedback, for a few key points (not everyone)
45	Break
20	Presentation - enabling high quality science
15	Presentation - using the Roadmap to identify refinements (simplified, just explaining the sheets)
20	Practical exercise in pairs/round tables; using the sheets and an example protocol. What causes of pain and distress can you identify; how would you reduce these; what practical welfare indicators can you identify?
20	Feedback
10	Conclusions - Padlet exercise to see what participants intend to do as a result of the workshop
